LONG COVID 101

July 13 @ 6:30 pm-7:30 pm

FREE

As another wave of COVID sweeps across the U.S., we are becoming all too familiar with the term “Long COVID.” There is much uncertainty about the long-term health effects stemming from this disease because we are still learning what happens to people beyond the immediate illness of COVID-19. Symptoms of Long COVID may include cognitive difficulties, fatigue, and shortness of breath. It appears to affect patients who had severe, mild, and asymptomatic COVID-19 infection.

Join us on Wednesday, July 13, 2022, from 6:30 pm to 7:30 pm at The Good Clinic’s northeast Minneapolis location for a FREE educational event, “Long COVID 101,” presented by our director of education, Dr. Kim Yung, CNP.
